

In the Pipes

Funding Proposal – Spring 2024

Requestor Names:

- Natalie Huante - Team Lead, Programmer
- Mo Hijazi - Level Designer
- Brian Byrd - Artist and Sound Designer
- Max Starreveld - Programmer

Project Concept and Purpose:

In the Pipes is a game development project our team is developing through the CPSC 440 course and in preparation for IEEE, the annual Intercollegiate Computer Game Competition, in late April. We currently have the framework to build on and are working on completing all its features and giving the game a finished look through polished assets.

Project Design/Construction:

The game is a 2D-side scroller built in the Unity Engine, in which players will take the role of Sam the Spider and navigate through various underground sewer systems of the world. Our goal is to create a product with this project that will not only be a strong contender in the IEEE competition but also a piece of work to show off for ourselves and the game dev pathway. One of our main goals for this semester is to enhance the player's experience by improving the game's visual and auditory aspects. With this funding, the assets we can buy and use as building blocks would allow us to achieve this. They will significantly improve the overall polish and immersion of the game and help us deliver an engaging gameplay experience. For development, we currently have a timeline and sprint schedule set up, along with the tasks and expectations for each sprint detailed. Our team is committed and excited to deliver a high-quality game product, and we would appreciate any funding to help us achieve this goal.

Required Equipment/Tools:

As I mentioned, we are using the Unity Engine, which we already have installed. We are using Unity DevOps as our method of version control, which allows us to manage multiple team members to work on the same project at once. Currently, only part of our team has access to this version control system due to the price of extending our team size. Any funding we receive would also be put towards getting all our team members access to this system.

Future Outlook:

As a team, we want In the Pipes to be a strong contender and a finalist in the IEEE competition. We want to create a product we can be proud of and showcase. Beyond the competition, we will continue developing through May to ensure we have thought through everything. Our priority is to provide a gameplay experience that is immersive and engaging. Post-development, we have discussed wanting to publish. Although we are still discussing this topic, we want to post our project in some form so we can have people access it internally and externally.

Proof of Funding Estimate:

I have provided a list of assets and version control estimates our team has constructed to give a better picture of what our funding would go towards.

Art:

Descriptions & Prices of Assets

- | | |
|------------|--|
| 1. \$14.99 | 2D Platformer Tilesets |
| 2. \$12.00 | 2D Backgrounds Collections |
| 3. \$7.50 | Game User Interface Pixel Art |
| 4. \$7.99 | Game UI Pack - Wood Theme |
| 5. \$4.90 | Jungle Enemies Pixel Art (Snake Enemy) |
| 6. \$3.00 | Dust Cloud Pixel Art Particles |

Sounds & Music

We have yet to decide which assets we prefer for sounds and music. However, we have listed below the number of assets we would ultimately need. Given our timeline, providing a consistent and immersive game experience is crucial to the overall quality of our project. Therefore, funding will allow us to find the building blocks that we can modify to provide that polished, final feel. We are estimating for this to cost us around \$30.

SFX:

Walking, Jumping, Swinging, Shooting Web, Air Swooch, Landing, Bite Sounds For Enemy Attack, Enemy Damage, Enemy Death, Spider Damage, Spider Death, Rushing Water, Dripping Water, Other Environment SFX, Page Flipping, Opening A Book, Closing A Book, Whisper Sounds For Narration, Dialogue Sounds For Narration

Music:

Lobby Music, Level 1 Music, Level 2 Music

Version Control

Unity Dev Ops Version Control Seats (\$7 per extra seat per month)

1 extra seat x 4 months = \$28
