

Letter of Support from Faculty Advisor

March 6, 2024

To Fowler School of Engineering,

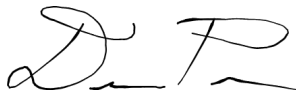

I am writing to express my full support for the "In the Pipes" game development project led by Natalie Huante and her team. As the faculty advisor overseeing this project, I have witnessed the dedication and creativity demonstrated by this team throughout the development process so far.

The team has shown exceptional initiative in designing and implementing an engaging 2D-side scroller game within the Unity Engine. Their commitment to delivering a high-quality product for the IEEE competition is admirable, and I have complete confidence in their ability to succeed.

I endorse their funding request for the purpose of acquiring additional assets for sound effects and art as well as for version control purposes, as it will significantly enhance the overall quality and immersion of the game.

I am proud to support this team in their development process and look forward to seeing the successful realization of the "In the Pipes" project.

Sincerely,

A handwritten signature in black ink, appearing to read 'D. Prate', with a stylized, cursive script.
