Average Score from teammates (out of 100):

- *[Response here]*
- *Trey: 92*
- *Cory: 90*

Feedback from teammates

- 1) (25%) *Are the testing instructions complete?*

Trey: Yes, seems complete, except for the animations of enemies.

Cory: Yes, the testing instructions are complete and clear as to how to test the game.

- 2) (25%) *Is the feature able to be tested per instructions?*

Trey: Yes all features but the animations are testable

Cory: Yes, all of the features can be tested aside from the enemy animations.

- 3) (25%) *Is the feature complete? Does it behave as expected/intended?*

Trey: Yes, everything is feature complete except for the animations

Cory: Yes, all features behave as intended and are complete, aside from the enemy animations.

- 4) (25%) *Did this sprint develop 1/4 of the product's total required features?*

Trey: Yes the game is very nicely made except for the colliders acting weird sometimes

Cory: Yes, besides minor things the game development process seems to be going very well.

Personal Reflection

How do you think you did? Do you think the score you received is accurate? Why or why not?

Overall, I am mostly happy with how this sprint went. I was able to get everything done with the exception of the enemy animations when they attack. However, I was also able to add in the leaderboard functionality for the most part, which was something I originally did not include in this sprint. I do think that I am still on track with where I want my end result to be for the last sprint. I was busier than intended this sprint, so it explains why I know there was more I could have added in terms of my own standards. Moving forward, next sprint will definitely have all of the functionality finished, including the rest of the enemy behaviors, and any other mechanics left. I really want this to be the case so that my last two sprints can focus on the art, the sound, theme, and fixing any of the level geometry. There are also a few things that I am thinking of changing or modifying in terms of the remaining mechanics list, so this is something I will think about over the weekend before I decide how to structure sprint four.
